Scott (Scott@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx) writes:

I need to configure my firewall to allow remote scripting on my SQL 2000 DB. Which udp and tcp ports do I need to open?

Would scripting being any different from running queries?

If SQL Server listens on port 1433, that is your guy.

How remote are these connections? From the Internet? Or just in the local network? If you expose the server on the Internet, make sure that you have a really strong password for sa and all other SQL logins for that matter. And make absolutely sure that you are running at least SP3.
