Hello,

Thank you for posting here.

To remove the public of a database, we just need to revoke the permission settings for the GUEST user. After that, only granted users are able to access that database. To do so, we can refer to the following steps:

a. Click Start->All Programs->Microsoft SQL Server 2005-> SQL Server Management Studio.

NOTE: By default the SQL Server Management Studio is not available in the Start Menu. You can install this client tool from the following download link manually:

<http://www.microsoft.com/downloads/details.aspx?FamilyID=c243a5ae-4bd1-4e3d-94b8-5a0f62bf7796&DisplayLang=en>

- b. Right click on the database reported by the MSBA tool -> select Properties.
- c. In the left panel, please click permission.
- d. In the right panel, please check if the Guest account is in the "Users or Roles". If so, please uncheck all the "Grant" checkbox if it is selected.
- f. Use the similar method to revoke the permission for "Public" role if it is also listed.
- g. Click OK to apply the setting.

After that, it will remove the public access of the database in question.

Have a nice day!

Best regards,

Adams Qu, MCSE, MCDBA, MCTS

| I ran the MS Baseline Security analyzer on a PC with SQL Express installed.

| The MBSA says "The following databases have public access.Remove the public access if it is not required - "...

| How can I remove Public access to theseSQL Express db's? I don't see an option for that in the SQL Server Configuration Manager.
