Andy ([Andy@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:Andy@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx)) writes:

I want to create a user call "limited" in sql 2005. This user should not be able to do anything (Select, alter, create update.....etc ) Only right to execute stored procedure in database called "mydatabase". In the permission column in database I am selecting the user and checked deny on every permission and checked grant on execute. When I try to execute stored procedure I am getting folowing error " Msg 916, Level 14, State 1, Line 1  
The server principal "limited" is not able to access the database "mydatabase" under the current security context.  
Msg 2812, Level 16, State 62, Line 4  
Could not find stored procedure 'dbo.spabc123'.  
Am I way out in my thinking that this is possible and has to be done this was, or is there a better way?  
I want to make sure all other rights are specifcally denied.

I don't think so. It appears that you want to grant the user CONNECT permission. Else you would not be complaining about that error.
