Hi
Please read README file provided by MS. It needs number of parameters in setup.exe file
To install a named instance you need something like that
C:\yourpath\setup.exe INSTANCENAME="MSDE"

Hi All

I am getting a wierd problem. When i try to install MSDE or SQL SERVER 2000 Sp 3a, i get the error message "The instance name specified is invalid". On the server i have installed SQL Server 2000. I am really confuse and i have searched a lot on the net. Kindly provide me with a solution as its urgent, i will be highly grateful. SOS !!!!!!!!!!!!!!!

Thanks and regars

hi thanks for the reply it was great to have ur reply

i tried with the parameters but in my case what will be the instance name as on my server only SQL SERVER 2000 is installed.

kindly reply
shantanu
