AHartman (Hoosbruin@xxxxxxxxxxxxx) writes:

I set this as described but when the user who was in the secret list connected using ODBC and ACCESS to link the table that couldn't make any changes to the table content.

Could not use view or function because of binding errors (#4413)

Well, you did not say how the users accessed the database, so how could I know?

Not that I know that much how linked tables in Access and that works. The only hint I can give an SQL Server person, is to set up a Profiler trace and see what Access emits. Else I think you need to take your new problem to an Access forum where they may have experience of that error message (which clearly comes from Access.)
