<SNIP>

Most importantly, make sure that you include the Private Key in the export so that the export format is a PKCS#12 format. The private key should be protected with a password, and then stored on physical media separate from the computer, in a secure physical location.

Alternatively, you can do the export by loading the Certificates MMC console, focused on the Current User. You can export the certificate from the Current User\Certificates\Personal store.

HTH,
Brian
