lsass.exe creates this log.

Windows 2000 automatically changes TsInternetUser's password daily. This is why you see the attempts at

11/07 17:00:28

11/08 17:00:28

11/09 17:00:28

11/10 17:00:28

It appears TSInternetUser's password change is failing due to Access Denied (0xc0000022). This is in contrast to denzilj's attempt that failed due to not meeting complexity requirements (0xc000006c).

You can turn on auditing for success/failure of account management events to get a clearer picture what is happening here.

11/06 17:00:28 Attempting password change server/domain SCS-DISTRICT for user TsInternetUser

11/06 17:00:28 SamChangePasswordUser2 on machine \\SCS-CENTRAL2 for user TsInternetUser returned 0xc0000022

11/06 17:00:28 SamChangePasswordUser2 retry on machine \\SCS-CENTRAL2 for user TsInternetUser returned 0xc0000022

11/07 16:19:36 Attempting password change server/domain SCS-DISTRICT for user denzilj

11/07 16:19:39 SamChangePasswordUser2 on machine \\SCS-CENTRAL2 for user denzilj returned 0xc000006c
