Hello,

Occasionally I have been online and getting a pop up that says –

"Message from [www.fightspamwithspam.com](http://www.fightspamwithspam.com) to xxx.xxx.xx.xxx (my IP)  
Stop these annoying messenger pop-ups Free and forever!  
Open your browser and go to [www.fightspamwithspam.com](http://www.fightspamwithspam.com)"

I went to the page and it tells me for w2k to disable my messenger service.

Should I do this or is this more sinister.

I am running Zone Alarm Pro. Can I prevent this with that?

Should I disable the messenger service?

Any help appreciated!

Thanks,

Tmuld.
