Hi, All

My windows 2000 server ZEUS is a member (but not a DC) of my doamin DOM (windows NT4 SP6a). On zeus I mapped a shared folder as drive G from another member machine Glovia (NT4, but not a DC).

Now all users in the domain have access to all files and folders on G as we set so. My problem is how to make IUSER_ZEUS and IWAM_ZEUS have access to the mapped drive G also? I check the security setting and find that I can only assign users in domain DOM or users from GLOVIA, but NOT from ZEUS. I tried login to ZEUS either as its own user or a domain user.

Is there any way I can do it? Thanks for the help!

Shen
