since the 22 of this month I have been receiveing these messages in the event log... previous to this date all i got was about service starting & service stopping

Now after the problem with the virus Im just enquiring to find out what these messages are???

I couldnt find any info on the microsoft website regarding to the event & source kept coming back with no results...???

Are these just telling me that my machine is setup this way or are they telling me someone is reading my active directory?? I am assuming that MSADC = Microsoft Active directory connection?

Any help or a point in the right Direction would be great

See below for Logs
