We know that. It's been at least two weeks you lost money for being on the job.

It is for you at least. Stop ranting and whining and post a problem. A specific problem.

We are unable to provide a solution to your current unposted issue other than to suggest you use the alternate software available. I'd suggest RedHat with a support contract since your business has so much to lose, and you may want to have a local consultant work with you on

migrating from Mirosoft products to alternatives.

If you wish to remain with Microsoft products, you have two viable options. You can post an intelligent description of your problem, expected results and solutions you may have attempted and we can work with you to find a working solution. You may also call Microsoft and open a support incident. In either case, you'll need to lose the attitude and work through your frustrations if you wish to accomplish your goals.
