No it's not using Terminal Services, and I don't think importing the reg file in the login script to the current user will work. I know it's strange, I'll have another look. We have a very hybrid system here and I can only guess that one of the other systems somehow is messing things up.

Thank you for all your help, I have got further here than the months of writing things on the many forums on the net.

Cheers,  
Johan
