

JNDI/ Kerberos Set Password in AD

I am able to authenticate via Kerberos using the code in JNDI Tutorial, but when I try to set a user's password I get the exception – OperationNotSupportedException, LDAP Error Code 53.

In several other posts I have read that you can only do it over SSL? Is that true? Can we not just do it in a kerberos auth session?

Any help will be much appreciated.

Thanks
