Windows 2000 hangs when running dos based time and attendance programme when communicating through COM port.

We have OLD time and attendance software that is DOS based.

I have tried to run it on a windows 2000 machine and although some bits work when we try and communicate through the COM port it hangs.

Any help would be appreciated – in the mean time i'll keep trying to work it out.

Fixes tried

COM port settings changed to that of the old machine.

Full administrator permissions on the win 2000.

Windows 2000 on SP4

Thanks
