Sir,

We have found IPSEC as an effective protocol for securing data communications between Windows and HPUX systems.

But we need some more information regarding this.

Please answer my following queries.

1.Does IPSEC require ADSI,and is tightly integrated with Win2000.Can it be implemented on WinNT4 with SP6a?

2.Is Dsclient.exe required for nNT4,Sp6a machines in order to implement IPSEC?

3.How can IPSEC be configured on Windows/HPUX-11i for securing data communication?

Regards
