By default only administrator can load and unload device driver. But you can go to user rights and change this option to all users. So that all can load drivers

Setting User Rights in Windows 2000

Click Start, point to Settings, and then click Control Panel.

Double-click Administrative Tools, and then double-click Local Security Policy.

Double-click Security Settings, double-click Local Policies, and then double-click User Rights Assignment.

Double-click the user right you want to change.

( Load and unload device driver)

Click Add, and then click the accounts to which you want to assign the right.

( add for all user)

Click OK, and then click OK again.

To confirm the changes have taken effect locally, close the Local Security Policy window and then open it. The newly assigned rights should show under the Effective Settings column.
