

Help / Patch 835732 is killing my Win2k machine

Hi...

Daughter's computer is on W2K, infected with Sasser. MS fix page says to download and install 835732, which we have done, and now the login takes 10 minutes to arrive after reboot — this clearly is one machine that is affected by the problem MS acknowledges in another bulletin. But it's a required patch to stop future infections by Sasser, so I'm in a catch-22.

If you have any ideas, please email me directly.

Thanks

cp
