To add to what Mike suggested you probably have blaster or sasser [first guess] worm. Make sure you follow his suggestions and also install an antivirus program that will monitor your computer, keep itself updated, and scan ALL your emails also. The first link below is to a free Singer utility from McAfee that is a small download that may be able to detect and remove the worm. The second link is to a company that offers a quality fee antivirus program for home users. ---- Steve
