Every ten minutes I get four hits in the DC security logs for the following:

Event Type: Failure Audit

Event Source: Security

Event Category: Account Logon

Event ID: 681

Date: 10/29/2004

Time: 10:53:41 AM

User: NT AUTHORITY\SYSTEM

Computer: MAS200

Description:

The logon to account: mooret

by: MICROSOFT_AUTHENTICATION_PACKAGE_V1_0

from workstation: TIM-MOBILE

failed. The error code was: 3221225586

The mooret account is disabled, and the primary user of the Tim-Mobile workstation used to be mooret before he left.

There are no services on the machine trying to use that account and I have no idea what is running on that machine that is trying to logon to the DC.

How can I track it down?

Thanks, Bob
