Hi people,

I'm releasing today a small tool named IPFront which enables users to generate IPsec rules easily. It really speeds-up the process of hardening Windows 2000/2003 in Bastion Host Environment.

Additionally, it allows to set-up IPsec exceptions, and enables a couple of TCP/IP Stack protections against DoSes.

So, IPFront is nothing more than a small Frontend/GUI that writes small scripts that one can later execute from within IPFront, or externally, as simple script files, in other servers, to apply a same set of parameters to a pool... or whatever you want to use that for.

It was developed as a HTA application, so you need at least MSIE 5.5 SP1 to run it. (Sorry).

Give it a try, I hope you will enjoy and find it useful.

Get it at:

<http://www.hernanracciatti.com.ar/papers.html> (IPFront link)

or soon... maybe also in

<http://www.ipfront.com.ar>
