Hi,

We ran a security vulnerability test on our servers using nessus tool. We could not find solution for several vulnerabilities that were found. I just would like to know what would be the solution for the vulnerabilities which we found.

1. LDAP allows anonymous binds
2. Oracle tnslsnr security Count
3. ShowCode possible Count – Windows NT box
4. SSH protocol versions supported Count
5. NFS export
6. nfsd service Count

For now, I think this should suffice. So, if you have the answer, kindly let me know.

thanks in advance
