Dave,

If that were true how come the real job doesn't run on Saturday when no one is RDP'd into it???

When this first happened I came in Monday morning and saw that according to the scheduler it was still "running" from Saturday, when it in fact never did really start.

I'll have one of the network guys that has access to the server room try this locally but I don't have too much hope it'll work for them either.
