Hi Roger – as we Say – PRAISE THE LORD...

After installing a parallel copy of WIN2K SERVER, have obtained Administrator access in Directory Services Restore Safe Mode.

This was achieved by renaming the secedit.sdb file (whilst in the second installation) to secedit.old_sdb and then COPYING the new secedit.sdb file into the security/database folder. This reset the local policy back to default, allowing the logon – Amen

Not out of the woods yet as i have to NOW get into the Forest <laughter>

Still, with time and patience, may be able to get things stable again in the Domain – Amen

Either way, i DO believe that MS has a LONG way to go to make their OS more stable and user friendly – they need to WRITE a program CALLED "Administrator" that monitors EVERYTHING the Admin is doing, AND WARNS in "friendly language" – DON'T DO THAT – YOU WILL LOCK YOURSELF OUT OF THE SYSTEM.

Amen

If you don't yet known Christ JESUS as your Lord and Saviour – PLEASE – start this process here : <http://www.Constellation7.org> and <http://www.Constellation7.org/Salvation/Salvation.doc>

This is more important than "saving" an OS; this Saves your soul from the wrath of God yet to come, on the ungodly and the wicked, through the Prayer of Faith to allow YOU The Full Water Baptism and The Baptism of The Holy Ghost in the Holy Name of JESUS CHRIST – King of kings and Lord of lords.

YES – it is ALL True – The Holy King James Bible – EVERY WORD – Amen

There is Heaven, Earth and Hell....

Be sure of Heaven with the Prayer and Follow On – Amen
