Hello,

We have three environments test, acceptance and production. On the test and production environment everything works fine, but acceptance is something different. So you should say make acceptance the same as test and production. So I did but it still doesn't work.

When I open my webservice in my browser I get the dialog box "Choose a digital certificate" this box is empty in acceptance and filled in test and production.

- I set the site to ignore certificates
- I set the webservice to require certificates and require ssl with encryption
- I set the Certificate Trust List

The only error I could find in the eventviewer was:

Event Type: Warning

Event Source: W3SVC

Event Category: None

Event ID: 45

Date: 30-3-2006

Time: 12:05:24

User: N/A

Computer: EHC\_SERVER01

Description:

The server certificate for instance '4' has expired or is not yet valid.

For additional information specific to this message please visit the Microsoft Online Support site located at:

<http://www.microsoft.com/contentredirect.asp>.

Is there someone with a solution.

Thanks in advance,

Pieter
