There is a free product called EZ Gpo that uses a custom .adm template that may be able to do what you want as shown in the link below. For XP SP2 computers you may also try using powercfg which can also be deployed via a Group Policy startup script if it can do what you want. --- Steve

[http://www.energystar.gov/index.cfm?c=power\\_mgt.pr\\_pm\\_ez\\_gpo](http://www.energystar.gov/index.cfm?c=power_mgt.pr_pm_ez_gpo)  
<http://support.microsoft.com/?kbid=324347> --- it is supposed to work on XP SP2 also

Dear all,

is there a way for a simple Restricted User to be able to change Power option -> Turn Monitor Off delay ?  
When trying it I get an "Access denied error"

Or in a more general way how to apply a power option setting to all local profile ?

Note that I am using SP4 with all latest security patch

Thnaks fro your help  
regards
