Hi,

You can use tool called SelfSSL from IIS resource kit.

You can download IIS resource kit from here

<http://www.microsoft.com/downloads/details.aspx?FamilyID=56fc92ee-a71a-4c73-b628-ade629c89499&D>

Hi,

How do I instruct Win2000/2003 server to issue a certificate without having a CA installed or having to purchase one from third party. I was told there is a way to have OS generate its own computer certificate. I have see on mail servers, etc. certificate issued by itself and with a common name of the server's FQDN.

Any help appreciated.

Thanks.
