Yes, it will let you select the CDROM Drive and from there do the backup. It basically just plants a backup file there. I did try this from the wizard and it worked. Oddly enough it saw my Mulicard reader drives as backup drives..

Hope that helps.

Nice. They have updated it.
I usually just have it scheduled to disk files which are then copied off and I had not tried direct to DVD for some time . . .
Thanks,
ra

hmmm . . . I overlooked the "to CD" part of your post.
Ntbackup can back up to file, which then may be recorded, or moved to storage server where most recent are kept online with periodic snap of the sets to DVD.

Can I use the backup program in XP to backup to CD. If so
How?

Dave P
