Hi,

This might not be possible but in windows 2000 can you make a folder (lets say data) available for everyone to see and create folders in, but once a folder has been created only the owner can read/write in it?

Give "Full control" for "Sub-folders only" to "CREATOR OWNER" and to "Everyone" you give special permissions, Traverse folder, List folder, Read Attributes, Read Extended Attributes, Create Folders and Read Permissions for "This folder only".
