There are hacks: for example, you can disable keyboard and mouse, by changing value of the Start key (DWORD) from 1 to 4 under HKLM\System\CCS\Services\Kbclass (or Mouclass).

There are null display drivers in the Server Appliance Kit.

But remember: whoever has physical access to the server, can have it. If you are co-locating your server in a place that is available via 1-800, "we-will-rock-you-forever" number, make sure there are some contractual obligations to limit access to the server to you or authorised (by yourself) staff. Qantas recently had an accident when big server (200kg) was stolen from a datacentre.
