No problem – it looked like you were really wanting
some ideas or a sounding board.

Is anything at all being writting into the security event log
relating to the IIS backend accounts or ASPNET account ?
(assuming you have failure auditing enabled).

I can find info EnumerateSecurityPackages (note not W form)
but am not dev in this area, but if true to form that would just
be Unicode version.

However, it seems that there is some errant call/marshalling
happening in the authorization negotiation for their .Net remoting.
