You would have to write and implement your own custom passfilt.dll which would need to involve a programmer. The link below has some details on that.

<http://support.microsoft.com/default.aspx?scid=kb:zh-tw:151082>

However I think you are overstating the problem. The special character can be any punctuation character or character on the keyboard above the 1-0 such as ! or \$ and it will help strengthen your passwords quite a bit. Try to communicate to your users what the special characters are and give them some examples of passwords that use them. --- Steve

<http://support.microsoft.com/?kbid=821425> --- password complexity requirements.
