Hello,

I have a windows 2k3 server which I'm having problems disabling the IE Enhanced Security Configuration. The component is unchecked in the windows components dialogs under Add Remove programs, and IE's start page tells me that it is disabled, but IE still behaves like it is on (none of my intranet servers, are considered on the intranet zone, unless I manually add them.)

Also if I check the registry key

HKCU\Software\Microsoft\Windows\CurrentVersion\Internet Settings\ZoneMap\IEHarden is has a value of one which is supposed to indicate that it is enabled for the current user.

Is there some way to fully disable IE ESC for all users?

Thanks
