

Certificate Web Enrollment Options Defaults?

I have created a specific User template that, when users enroll for the certificate, I want certain options defaulted for them within the Web Enrollment. The options I would like checked by default are "Enable Strong Private Key Protection" and once submitted with this option I want to have the Set Security Level automatically set to High instead of Medium. This would eliminate some issues with user enrollment errors. Is there a way to set these setting in the template itself. I have not had any luck in my testing.

Thanks.
