Hi,

I have just installed a stand-alone CA. For security, it is a stand alone server. not integrated in my local domain.

Domain users use outlook (2000, XP, and 2003) as mailer software.

Is there a way to force Outlook to consult the CRL, published by ma stand-alone CA.

Can I publish revoked certificates in my Active Directory or in share directory ?

Can I use GPO ?

thanks for your help.

fabrice
