Do not grant the user right to Log on locally to those users or to any group that contains (directly or indirectly) those users. There is a matching policy to deny that user right, but if possible a positive statement of who should have the right is best. For a server, consider defining a group like LocalLogon and put non-admin accounts that need this right in that group, then alter the Log on locally user right so that Administrators and LocalLogon are granted the right. Be sure to allow machine local accounts that need the right (IWam_, etc.).

You likely have in the user right at present, Users (which itself has Domain Users, Interactive, and Authenticated Users), Power Users, and Everyone

There are several users that we'd like to prevent from logging on to servers. Is there any way to do this?

Thanks,

Dan
