I have a folder named QA that is inheriting the following permissions:

Domain Admins – Full  
Authenticated Users – Read & Execute

I manually add Group A for read, execute and special permission ( I enable delete subfolders and files) I make sure Delete is unchecked.

Now I create "Magic" folder inside QA and I want to make sure Group A has Delete priviledges for subfolders and files of Magic but I dont want group A from deleting the "Magic" Folder.

How do I do that?
