In article <eokWBecTHHA.4076@xxxxxxxxxxxxxxxxxxxx>, dontsendhere@xxxxxxxxxx says...

A few years ago I was looking into a solution for a customer where they wanted to use their PKI infrastructure with biometric devices and access cards, and map it to Active Directory accounts for Windows login. At the time it would have been a very tedious process to map these accounts across the enterprise. Is there something better available today to automatically manage the link between the PKI LDAP accounts and the Active Directory user accounts?
