DCDIAG and NETDIAG reported no problem, all tests passed. I send this post to group policy newsgroup

"Roger Abell [MVP]" <mvpNoSpam@xxxxxx> píše v diskusním pYísp vku
<news:%23Hxxs5SkHHA.4904@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>

I would suggest that you first establish the basic health of your AD by running netdiag and dcdiag on each DC. When these are reporting no issues on any of the DCs, you then might want to post your situation to the microsoft.public.windows.group_policy newsgroup.

How cain i create new GP on Windows 2000 Server?
. new domain controller group policy
. new domain group policy

I have Problem with ID 1000

This error:

<http://www.eventid.net/display.asp?eventid=1000&eventno=6866&source=Userenv&phase=1>

Windows cannot access the file gpt.ini for GPO. The file must be present at the location <>. (). Group Policy processing aborted.
