I don't know of anyway where you can explicitly disallow a user to use the console yet be able to logon to the box remotely. The only way I know is don't allow remote access, via the rdp configuration.

Is it possible to disallow console login for certain users/groups?

By console login in mean using RD like so:

```
mstsc /v:box1 -console
```

The scenario is that I would like for only one user on the box to be allowed to login to the console (session 0). This is because the box is running an application that unfortunately cannot be run as a service, thus we need to preserve the console login and do not want any other user assuming session 0.

I know you can disable kicking off an admin logged in to session 0 in gpedit, but i would like to go one step further and explicitly deny the right to all users except for one.

Is it possible?

Thanks  
JS
