If you think that – you should have a look at ISA 2006. Then you will think 2004 is a piece of crap. MS did a nice job making 2006 a LOT better.

Yep. The desired effect is usually tasked to a proxy that
gates access to the external network.

So is that why I've heard proxies being called the 'gatekeepers' ?

ISA is pretty nice and pretty robust.. the SBS version usually sucks
BADLY... the ISA2004 is VERY feature rich....
