I must stress the fact that domain membership of the IAS server will be a requirement – the firewall considerations part of TechNet concerns a firewall between RADIUS clients (wireless APs and controllers) and IAS.

There's no need to host IAS on DMZ.

You can make the Radius/IAS server a domain member on a DMZ. See if these two articles help:

Windows Server 2003 Technical Library > Planning for IAS as a RADIUS Server

IAS as a RADIUS server security considerations

Hello,

we have a wifi project and we would like to authenticate Active Directory users.

Re: Radius server in a DMZ, how to authenticate AD users ?

Is there a way to add the Radius server in a DMZ without being member of the AD domain and authenticate the wifi users ?

Do you know basic secure infrastructure for such a situation ?

Thank you

Pascal

Thank you for your answers.

But is it really secure to join the radius to the domain ?
