I found out what is running and failing. Its the OWSTimer.exe file. I googled it and some say its spyware and some say its part of SharePoint. Now I do have SharePoint on my server. So am I stuck with this error all the time now or is there a way to fix it?

Hi Mike,  
Danny is righth, but if you have already installed one then :

The log says that it is logon type 4 that means batch logon, so there is a program tries to connect some resources, and also it gave the caller process ID ; if you check the windows task manager with process id (view --- select column) then you can find which program is generating this error.

lets just start off by saying I'm a developer and no longer a server admin BUT I'm doing some server admin work to help out.

Ok, on one of my Windows 2003 servers I keep getting this error in the event viewer and I've done some research on it and I'm getting information from spy ware, a virus to something Microsoft uses to even a worm. Can anyone shed some light on this for me?

Logon Failure:  
Reason: Unknown user name or bad password  
User Name: testUSER  
Domain: Bulldog

Re: need some help on this one

Logon Type: 4  
Logon Process: Advapi  
Authentication Package: Negotiate  
Workstation Name: FileSystemServerABCD01  
Caller User Name: userName  
Caller Domain: Bulldog  
Caller Logon ID: (0x0,0x2990D)  
Caller Process ID: 4076

any suggestions on what can be causing this? an update. patch, etc  
anything?
