Dear All,

need your help.

I'm stuck in that the GPO only allow me to configure the "account policies" from Computer Configuration.

I could not find the way to allow me to configure it by "User Configuration", cause I would like to define the "Account Policies" for the Users group those located on different OU.

I would like to know is it possible to define different "Account Policies" for different OU on Windows 2003 AD.

Like I create a OU name "Finance" and I would like to apply a special "Account Policies" for this OU.

Then create another OU name "Enginnering" then to apply another "Account Policies" for this that different with OU "Finance".

Thanks a lot

sammy
