Roger, you're right. I'm not preventing, I have a clue if I log trys of multiple logins The content is used 7*24*365. So a logged user will keep logged all the time. Any attempt to log in with an already logged credential is a violation (or error).

You're also right about cconnect, I'm rebuilding my DC after trying, but I think I made a mistake and I'm going to try again

Another point is this, I need to prevent access to a mms (or http) connection, not a shared resource in a netowrk

Re: Permit only one network logon per user

All three methods indicated, cconnect, limitlogon, and the share-based of the KB provided, intend to prevent a second local login. It sounds to me that you really want a mod in the app so that it does not allow a s
