But wouldn't giving domain admin rights be exactly what she said she doesn't want – full admin privs?

Madam Anna,

Try Domain Admins right on that machine.

- Is there a way to give a person admin rights for Server 2003 to:
- Shutdown/start up server
  - Start/stop services
  - View BackupExec backup logs
  - Reset user passwords

Without having full Administrator privileges, (i.e. view user share files)?
