Thank you for advice. I know for that. That is the way, also for limit broadband on IP's, users.... but I don't have proxy (read, limited) and trying to make some restrictions without extra money. So I'm asking for advice if it's possible anyway.

thnx

Hello,

the only "smart" way is to use a web proxy, that will authenticate and only let legitimate users surf the web.

Then, on the pix, block all outside connections from workstations, and let the proxy going out for http/https/ftp.

Microsoft ISA can be used, or third party proxy (squid, clearswift...)
