Hi all,

I got this message on a DC (Win 2k3 R2 SP2):

```
=====
Event Type: Error
Event Source: Service Control Manager
Event Category: None
Event ID: 7022
Date: 13/12/2007
Time: 12.55.29
User: N/A
Computer: SRV01
Description:
The Kerberos Key Distribution Center service hung on starting.
=====
```

Beside the error, everything is working fine and all the services are positively working locally and remotely.

The error originates AFTER I installed two web certificates in IIS to have the two sites working on SSL (ports 443, 444 respectively). These two digital certificates has been issued by a "virtual" enterprise root CA (pratically a VM with a stand alone W2k3 Standard with AD installed) which is, indeed, NOT online.

First, I installed the "vm" enterprise CA certificate under the MMC-

CERTIFICATE snap-in -> local computer -> Trusted CA ... I

rebooted ... and I did NOT get any error from the Kerberos Key Distribution Center.

Then I installed the pending certificates under IIS and I rebooted again. ONLY AFTER installing the web certificates, I started getting that error from The Kerberos Key Distribution Center service :-(

Any hints? :-) TIA :-)

The Kerberos Key Distribution Center service hung on starting. ID 7022.

L/S
