So what access can I grant to get by the default, and open access to the logs?

"S. Pidgorny <MVP>" <slavickp@xxxxxxxx> wrote in message <news:uwF5zoXqIHA.4280@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>

That's by default – except for the security log.

Hi, I want to give a set of developers access to view a Window 2003's event viewer logs remotely using an MMC snap-in without granting them administrator access to the server? Does anyone know how/where I grant those specific rights?

Thanks,  
Paul
