What I would like to see is some warning wording in any publicity articles about the feature, for example:

<http://www.microsoft.com/windowsxp/pro/using/howto/security/encryptdata.asp>

To my mind, such an article must contain a warning up front, and a link somewhere in the body to a clearly delineated procedure for saving the certificate and private key. I realize that this process is quite different in a domain than on a standalone XP Pro workstation, but it's the folks with the standalone XP Pro workstations who really need the help.

Speaking of which—does anyone have such a link?—this would surely be useful, and I find the process rather difficult to find in Help and Support, let alone give a reference to in a newsgroup message.
