theso insert the cd & do a upgrade will fix this? what about un installing sp1 will that work i will try it tells me a few programs may not run if i do it.

thanks

This happened to me, After I installed SP1, my sound card quit working. I tried to do a repair re-install and got nothing but "invalid password". Gave up on the recovery console and went through the "upgrade install". Needless to say, my password was fine when all was done.

It is **not** all the customers fault. I am a trained professional with an MS degree in CS. Microsoft simply speaks to their "broadest sterotypical" customer base, and never mind people who fall outside of the stereotype.
